

PRODUCT DESIGN · 0→1 · WEB APP

A calm, honest way to read the markets.

Fluxus Fisci — “the flow of the treasury.” A finance companion built to help you **understand** what’s moving and *why*, with an AI layer that shows its work and is honest about the limits of what it knows.

ROLE	TYPE	SURFACES	CRAFT
Product design, design system & build	Self-initiated flagship	11 screens, fully responsive	Patina design system · bespoke data-viz

The problem

Consumer finance apps are dopamine machines — gamified, trade-pushing, and dishonest about how much their “AI” actually knows.

The bet

A tool should help you *understand*, not push you to *act*. Make the AI’s honesty the product — and the signature design problem.

The outcome

A real, running product with a bespoke design system, a transparency-first AI panel, and machine intelligence a person can trust *appropriately*.

01 — THE PROBLEM

Two problems wearing one mask

Most consumer finance apps optimise for engagement: red-and-green anxiety engines that nudge you to trade. And they overstate their intelligence — a threshold on a moving average gets dressed up as a “neural network,” a heuristic becomes a confident “Strong Buy” with a fabricated accuracy score.

That’s two failures at once. It’s **stressful** to use, and it’s **dishonest** about what the software actually knows. The starting point here was literally one of those apps — a generic “AI stock predictor” with buy/sell verdicts, invented confidence percentages, and a dead LSTM whose only job was to let the UI print the words “neural network.” The redesign began by naming what was wrong.

X Gamified, trade-pushing

X Alarm-red / neon-green

X “Strong Buy / Hold / Sell”

X Fabricated “87% confident”

X Black-box “AI”

X Hidden data provenance

02 — THE PRODUCT BET

Understand, don’t transact

“A financial tool should help you understand, not push you to act. The AI explains what’s happening and why; it never tells you to buy or sell, and it’s honest when it doesn’t know.”

That single position does three things at once. It’s a real, defensible **design stance** — calm, instrument-like, literate. It sidesteps the **financial-advice liability** baked into the original app — this is about literacy, not recommendations. And it reframes the AI from a thin buy/sell oracle into a genuinely interesting design problem:

How do you present machine-generated insight so a person trusts it *appropriately* — neither blindly, nor not at all?

“Patina” — the authority of a well-made instrument

Precise, quiet, instrument-like: the feeling of well-made financial infrastructure — ledgers, fine measuring instruments, archival records — reinterpreted as something calm and human. It deliberately avoids the three “AI-default” looks that read as machine-generated on sight.

A palette that isn’t an anxiety engine

Cool paper instead of the default dark dashboard. **Verdigris** — patinated bronze — as the accent, for the “aged instrument” feeling. Direction is carried by arrows and sign, never hue alone, so it’s colour-vision safe.

Type as a first-class concern

A literate, human voice paired with an engineered, precise one. Every figure in the product is tabular and lining — number typography matters in a finance tool.

DISPLAY	Fraunces — the flow of the treasury
UI / BODY	IBM Plex Sans — calm, legible, engineered.
FIGURES	IBM Plex Mono · \$66,960.20 · +3.11% · RSI 61

Principles that governed every screen

MOTION

Aids comprehension
Figures ease into place; skeletons over spinners; a verdigris wipe over auth. All gated behind prefers-reduced-motion.

STATES

Loading · empty · error · success
Every screen designed for all four. Errors say what happened and how to fix it; empty screens invite action in the product’s voice.

DATA - VIZ

Identity by label, not colour
Bespoke charts and sparklines; a six-colour categorical palette validated for contrast and colour-vision separation on the light surface.

DESIGN SYSTEM

The Patina system

One coherent language — a light, instrument-like palette, a literate type pairing, and a bespoke data-viz vocabulary. This page is the single source of truth.

04 — KEY DECISIONS

Decisions & the why behind them

Cool paper, not dark	Light and calm sidesteps the AI-default dashboard. The whole product should feel like reading, not monitoring.
Muted up/down semantics	Verdigris for up, clay for down — never neon-green / alarm-red. A finance tool shouldn't manufacture urgency.
Qualitative confidence	No fabricated “87% accurate.” Confidence is a level — low / tentative / moderate — derived from how much the signals agree, shown with its rationale.
Boldness spent in one place	The AI transparency panel is the signature. Everything else stays quiet so the one loud thing carries meaning.
Fully-fluid responsive	A clamp-based type & spacing scale means the UI scales continuously with the viewport, not only at breakpoints.

05 — THE SIGNATURE

The transparency panel is the design

Boldness is spent in exactly one place. The signature surface doesn't just give a reading — it shows its work: what it looked at, how it reasoned, how sure it honestly is, and what it can't say — with “not advice” as first-class copy, not a footnote.

“**what this can’t tell you**,” and a provenance badge — so a reader calibrates their trust instead of taking a verdict on faith.

06 — DESIGNING HONEST AI

Two kinds of intelligence, each labelled as exactly what it is

The hardest design work wasn’t visual — it was making machine output legible and trustworthy. The product carries two distinct kinds of “intelligence,” and never blurs them.

A — TRANSPARENT SIGNALS

“Signals reading”

Plain, auditable arithmetic over price history — momentum, moving average, volatility, RSI, range. The plain-English narrative is composed deterministically from those exact numbers. No black box; nothing invented.

B — EXPERIMENTAL FORECASTER

A model that admits its limits

A real per-symbol LSTM ranks a next-day outlook — and puts its own walk-forward backtest (skill vs. a naive guess) *louder* than the ranking, so it’s never mistaken for a reliable call.

Ask, and see the reasoning

See what a learned model expects, and ask about the market or an asset. Everything here is grounded in the data on screen, shows the reasoning, and is honest about what it can't say — it explains, it never tells you to buy or sell.

Model outlook

EXPERIMENTAL · LSTM

NEXT TRADING DAY

Ranked by an LSTM's expected next-day return on labelled snapshot data. On average this model barely beats — often trails — a naive 'no change' guess, which is exactly what you'd expect from near-random daily moves. Read it as a demonstration, not a signal to act on.

AVG SKILL VS. NAIVE: -89.9%

#	ASSET	FORECAST	DIR. ACC.	SKILL VS NAIVE
1	AMZN Amazon.com Inc.	+1.35% → \$247.47	63%	+9.9%
2	TSLA Tesla Inc.	+0.37% → \$332.67	69%	+8.5%
3	PLTR Palantir Technologies	-0.19% → \$154.49	56%	-20.5%
4	META Meta Platforms Inc.	-2.10% → \$703.80	44%	-53.1%
5	MSFT Microsoft Corporation	-3.48% → \$401.31	50%	-129.8%

-9.97%
→ \$160.84

31%

-214.6%

An experimental model's expectation, shown for understanding — not a prediction to act on and not financial advice. Note the skill-vs-naive figure: markets are near-random day to day, and this rarely beats a naive guess. Nothing here is a recommendation to buy or sell.

Best performing stock next quarter?

SYMBOL (OPTIONAL)

Ask ↑

Which stock does the model rank highest?

Best performing stock next quarter?

What's moving today?

How is AAPL trending?

SIGNALS READING

No one can honestly call the best stock a quarter out — here's what the data can say

Nothing here can predict a quarter ahead: daily moves are near-random, and this LSTM only forecasts one trading day. What it *can* say — for the next session it ranks AMZN (Amazon.com Inc.) highest, about +1.35% expected — though on average it barely beats a naive guess (avg skill vs naive -69.9%). For a longer look, the backward-looking trend over the past quarter is below.

Composed deterministically from the technical signals below — no language model, nothing invented.

HOW IT READS THIS

Each symbol's next-day return is forecast by a small LSTM trained on its own daily log-returns, then scored with a walk-forward backtest (skill vs. a naive guess, directional accuracy). The ranking is by the model's expected return, with the honest backtest numbers next to it.

WHAT THIS CAN'T TELL YOU

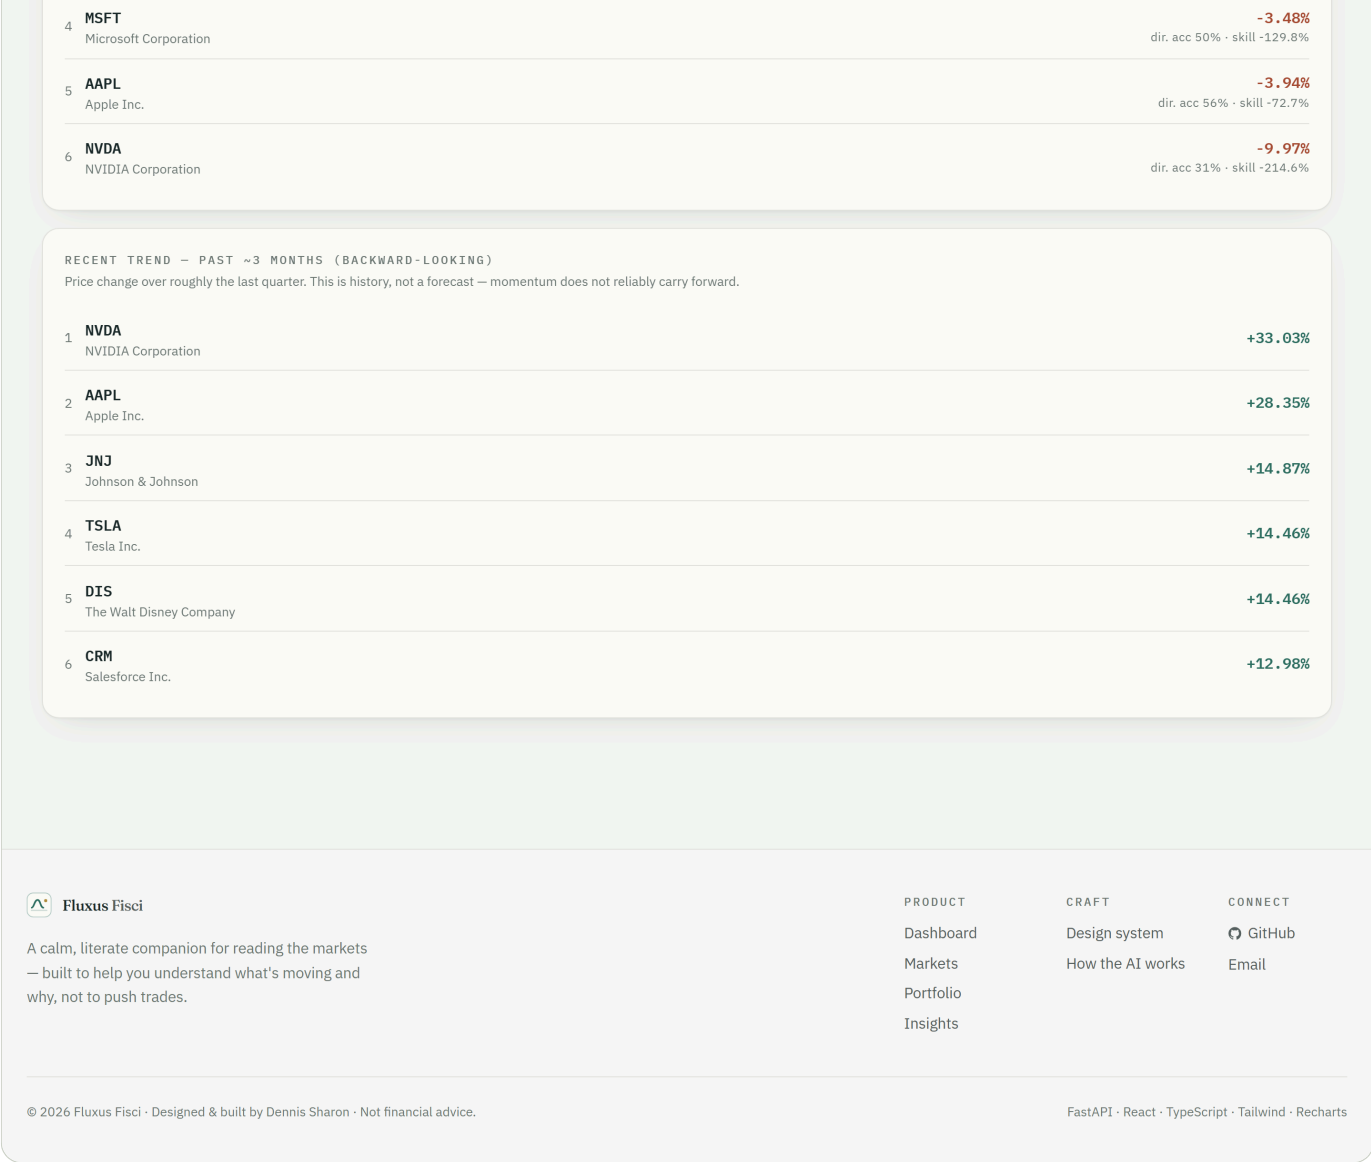

These are near-term or backward-looking reads only. The model forecasts just one trading day ahead — it cannot project a quarter, a year, or 'Q4'; the trend list is past performance, which does not reliably carry forward. Nothing here accounts for news, earnings, or valuation.

This is an explanation to aid understanding, not financial advice. Markets are uncertain; nothing here is a recommendation to buy or sell.

LSTM NEXT-DAY OUTLOOK

Ranked by an LSTM's expected next-day return on labelled snapshot data. On average this model barely beats — often trails — a naive 'no change' guess, which is exactly what you'd expect from near-random daily moves. Read it as a demonstration, not a signal to act on.

1	AMZN Amazon.com Inc.	+1.35% dir. acc 62% · skill +9.9%
2	TSLA Tesla Inc.	+0.37% dir. acc 69% · skill +8.5%
3	PLTR Palantir Technologies	-0.19% dir. acc 56% · skill -20.5%

Insights — the experimental model’s ranked outlook with an **honesty banner** **deliberately louder than the numbers**. Ask it “best performing stock next quarter?” and instead of faking a horizon it can’t see, it says so plainly and offers a labelled, backward-looking trend. The honesty *is* the answer.

The design goal was calibrated trust: make the reader believe the model exactly as much as it deserves — no more.

Every screen, designed end to end

Eleven surfaces, each with loading / empty / error / success states and responsive down to mobile.

3 / 3

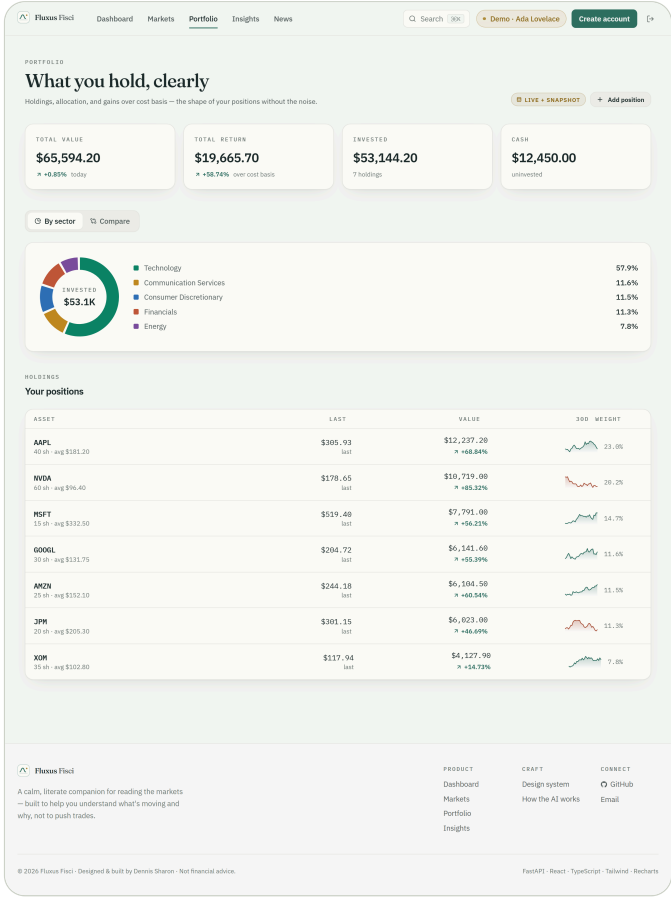

An explanation to aid understanding — not financial advice.

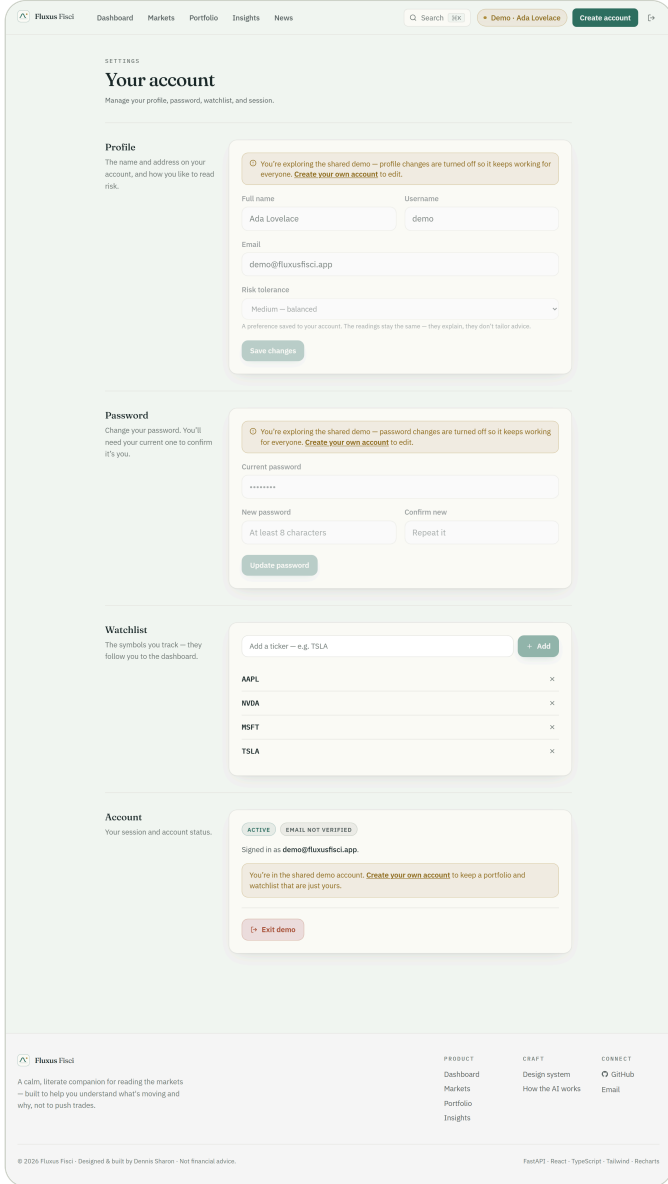

Onboarding — a literate landing that states what the product is *for*, not a wall of form fields.

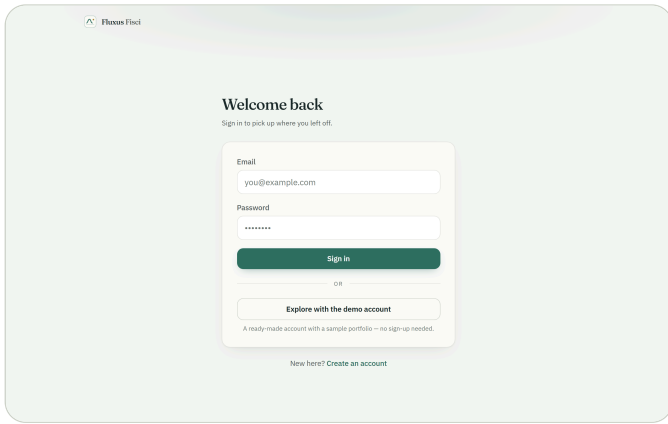

News — a finance-only feed with topic filters, sentiment and ticker tags, and an honest live/snapshot badge.

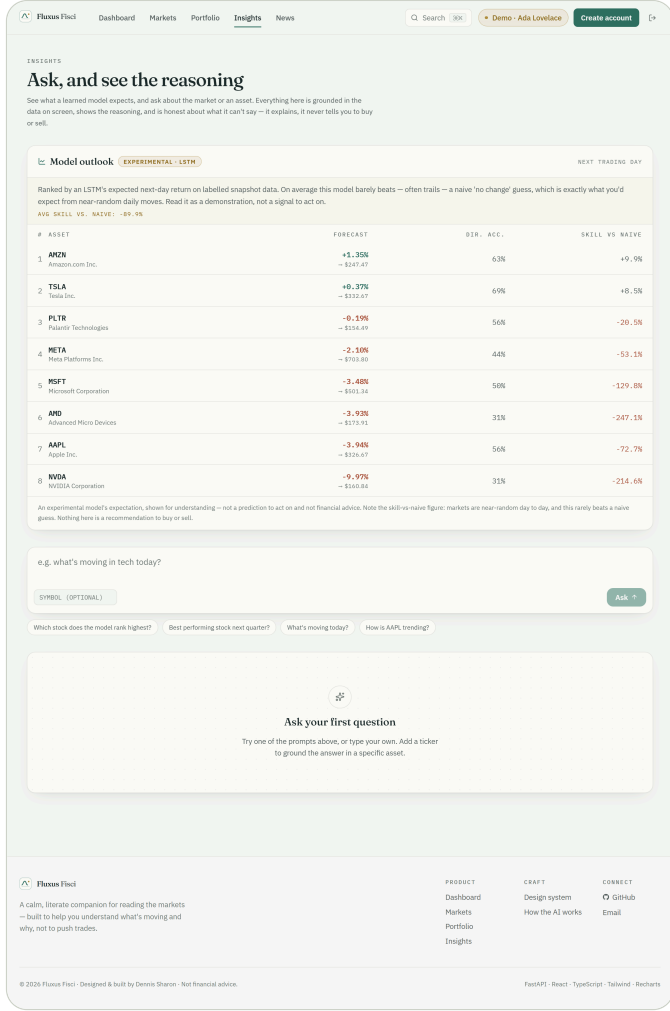

Portfolio — editable holdings with correct P/L over cost basis, allocation, and calm sparklines.

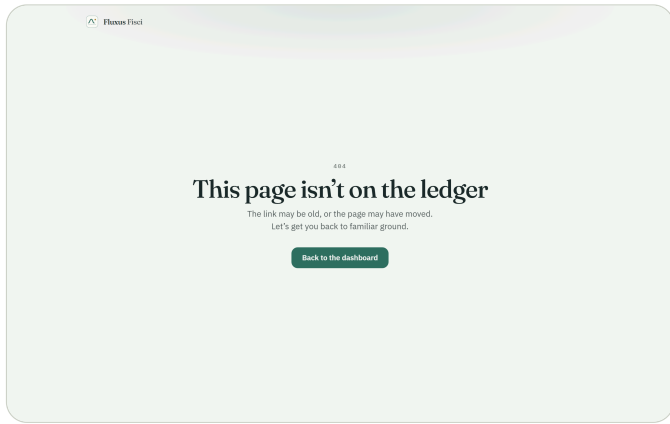

Settings — profile, password, watchlist, and session: a complete account section.

Sign in — calm, single-window auth, fit-to-viewport, never clipped.

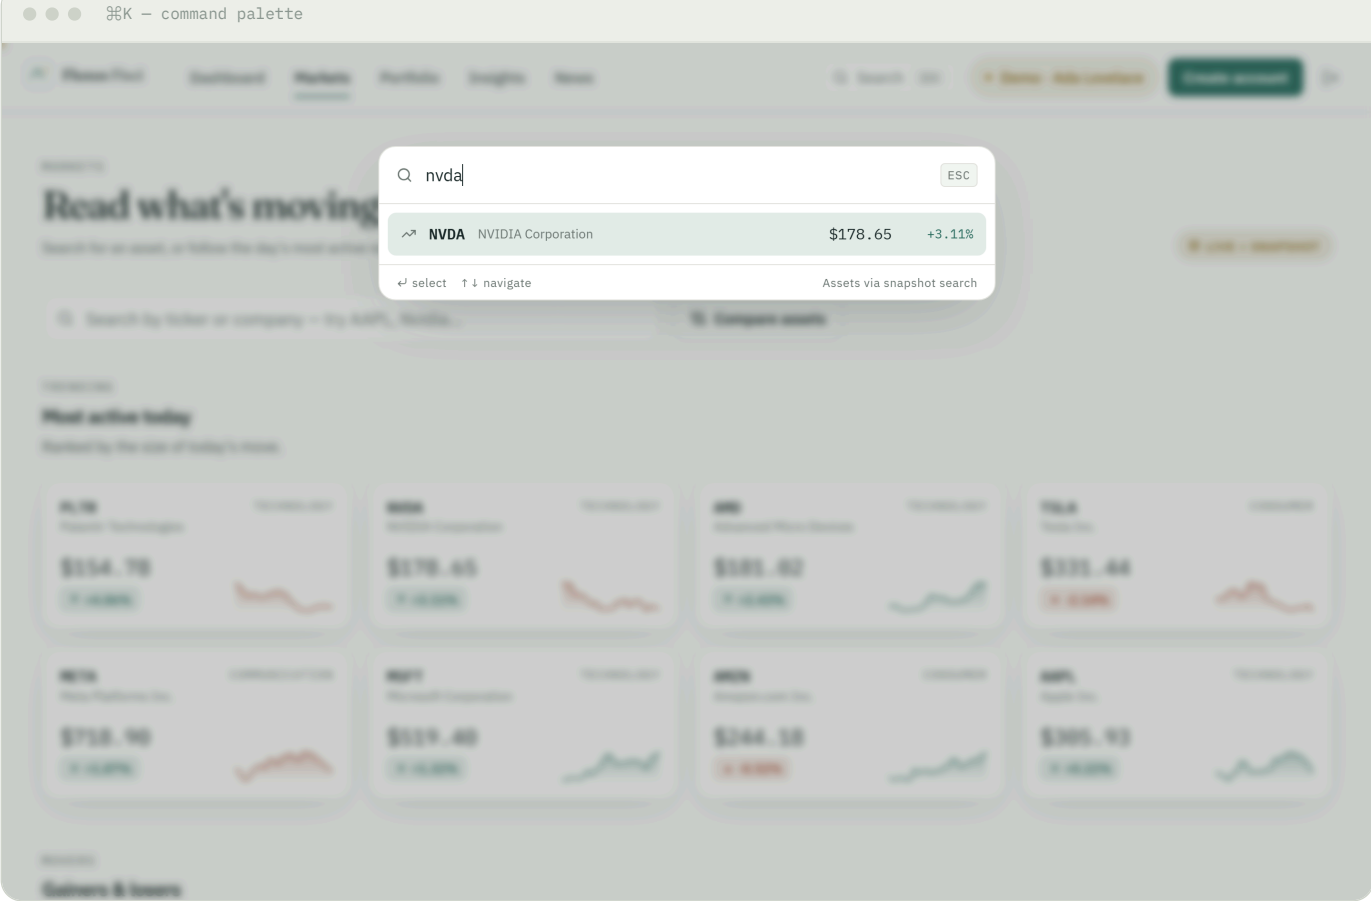

Insights — the model outlook plus a chat box grounded strictly in the data on screen.

404 — a standalone, on-brand not-found page. Even the dead ends are designed.

The details that make it feel like a product

⌘K command palette — search any asset or jump to any page from the keyboard, app-wide. An accessible combobox: focus stays on the input, arrows move a virtual selection, Enter opens.

LIVE DEMO MODE

Self-announcing

A one-click demo that announces itself — a demo badge, a guided tour of the differentiators, and read-only guards enforced server-side so the shared account can't be hijacked.

COMPARE

Two or three, side by side

Put assets next to each other — price shape, the same labelled signals, an honest reading of each. Embedded inline under Markets and Portfolio.

TRANSITIONS

Considered, never gratuitous

A verdigris wipe over sign-in carrying a rotating financial quote; a flux-line route-progress bar; a sign-out splash. All respect reduced-motion.

Fully responsive — a clamp-based scale, not just breakpoints

The whole UI scales *continuously* with the viewport rather than snapping at a handful of breakpoints. The dashboard reflows to a single, calm column on mobile — the same tabular figures, the same honest source badge, the same voice — with touch targets and spacing that hold up at 390px wide.

- Guided demo tour
- Verdigris auth wipe
- Flux-line route progress
- Server-enforced read-only demo
- prefers-reduced-motion

DASHBOARD

Good to see you, Ada.

What I’d carry forward

The most valuable lesson wasn’t about colour or type — it was that **honesty is a design material**. Choosing to show uncertainty, to label provenance, and to let a model admit it has no edge turned out to be the most distinctive thing about the product. Restraint (spending boldness in one place) made the one loud thing — the transparency panel — actually mean something.

If I took it further

RESEARCH

Trust, measured

Usability testing on the confidence language: does “tentative” land the way the qualitative model intends? Iterate the wording against real comprehension.

SYSTEM

Dark, done right

A dark variant that keeps the calm — the hard part is preserving the colour-vision-safe up/down semantics without going neon.

PRODUCT

Alerts without anxiety

Notifications that inform rather than nag — the same “understand, don’t transact” bet applied to a genuinely tricky surface.

Fluxus Fisci

A calm, literate companion for reading the markets — designed & built end to end as a portfolio flagship.

Not financial advice. All figures shown are a labelled market snapshot for demonstration.
